

StratoSphere VIP function

LM Productions delivered yet another night to remember for a prestigious VIP function, utilising inflatable structures and top of the range audio visual equipment combined with special effects.

A 16.7m StratoSphere was installed in the grounds of one of Britain's medieval castles and full dome video along with abstract content was projected using five 15k projectors for a completely immersive venue.

The StratoSphere housed a stunning dancefloor which incorporated LED lighting. Ice effect furniture was highlighted by internal LED lights, together with a curved drinking station, which added to the overall ambience of the venue.

Audio Visual effects included high quality surround sound, specialist lighting and LED's . Three colourful lasers projected beams into the night sky.

A 10m Trident venue also added to the event's exclusivity and featured a glittery chill zone for the VIP guests which was welcome in the early hours after dancing the night away to the DJ set in the StratoSphere.
